

Rio Tinto Gudai-Dari

Engineering, Test and Commissioning

One Reclaimer and two stackers are part of Rio Tinto process plant in Gudai Dari (200 kilometers north of Newman in the Pilbara region)
MEngS scope of work in this project was Engineering test and commissioning of electrical system of three Machines for this project. MEngS has provided this service through FLsmidth Industries. The project lasts six months and finished successfully in 2023.

In this project MEngS has to provide a full electrical system testing of machines during 3 days shutdown, performing lots of tasks during such short shutdown period, was a challenge that MEngS team performed successfully

Arman Vakili and Bahador Zamanifar were two MEngS key engineers involved in this project.
